EDUCATION

City University of New York, College of Staten Island

Bachelor of Science in Computer Science

August 2025 – December 2026

New York, NY

Relevant Coursework: Data Structures & Algorithms, Software Engineering, Machine Learning, Databases, Operating Systems

Rochester Institute of Technology

B.S. Computer Engineering Technology, Minor in Software Engineering

August 2018 – May 2023

Rochester, NY

PROFESSIONAL EXPERIENCE

Do One Technologies

Software Engineer Intern

August 2025 – October 2025

New York, NY

- Built a cross platform POS and CRM application in TypeScript and Vue.js, replacing manual appointment and inventory tracking with workflows synchronized across devices.
- Implemented offline data handling with conflict resolution that kept appointment and inventory records consistent across concurrent devices, reducing checkout processing time by 10%.

88 BaoBao

Operations & Systems Lead

September 2023 – July 2025

Concord, CA

- Evaluated and selected POS and inventory systems for a new restaurant launch, onboarding vendors and scheduling a staff of 12 through its first year.
- Built daily revenue and cost tracking from POS and vendor data that surfaced demand patterns by menu item, driving menu pricing and prep volume decisions across 12 months of operations.

Lockheed Martin

Systems Engineer Intern

June 2023 – September 2023

Owego, NY

- Appointed product owner for a cross functional team of 5 software, electrical, and systems engineering interns, defining project scope and requirements and presenting the final solution to engineering leadership.
- Delivered an autonomous navigation and obstacle avoidance system in C++, passing 100% of maze navigation test cases.
- Completed integration testing for Electronic Support Measures (ESM) hardware, validating system behavior against documented procedures.
- Updated 10+ Confluence procedures and troubleshooting guides based on integration test results, reducing future issue resolution time by 20%.

Con Edison

Software Engineer Intern

May 2022 – December 2022

New York, NY

- Translated \$12M+ in security capital requirements into SQL queries and Power BI dashboards with Gantt based tracking, giving leadership visibility into project status and delivering reporting 7 business days ahead of schedule.
- Built downtime alerting and automated incident routing in Azure Logic Apps, Kusto Query Language, and Python, delivered across Agile sprints tracked in Jira, cutting system downtime by 25% by escalating failures to responsible engineers faster.

PROJECTS

Computer Science Curriculum Planner

April 2026 – Present

- Built an interactive academic planner in React covering two degree tracks and 60+ courses, positioning each course by prerequisite depth and tracing the full chain behind any course selected.
- Implemented live eligibility tracking that recalculates available courses as students mark coursework complete, with cursor anchored zoom and drag panning across the map.
- Integrated Supabase authentication and Postgres persistence so each student plan saves privately and stays available across devices.

Inventory Forecasting System

July 2025 – August 2025

- Built a machine learning pipeline in Python forecasting daily restaurant revenue from sales, holiday, and weather data, engineering lag and rolling window features to train a Random Forest model.
- Integrated the Open-Meteo API for weather enrichment and encoded operating rules such as scheduled closures, building a 7 day forecast dashboard in Streamlit.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, Python, Java, C/C++, HTML/CSS

Frameworks & Tools: React, Node.js, Vue.js, Docker, Git, Jira, Confluence, Agile

Data & Cloud: PostgreSQL, REST APIs, Power BI, Azure
